skimovex

waste water treatment

making energy safe, efficient and clean

Peerless, a recognised global leader committed to innovation, its people and a better world, by creating engineering solutions for the energy industry.

skimovex Waste Water Treatment

Skimovex are the leading, worldwide, producers of waste water treatment systems, designing, engineering and supplying bespoke individual systems through to complete plants for both onshore and offshore operations.

Peerless Support Services

The aftermarket sales and spare parts support from our UK office, with state-of-the-art performance simulation and testing at our Dallas-based parent company, provides our clients with an industry leading service and support package, from first contact through to installation and beyond.

Our systems operate within three key areas:

Oily Water Treatment

The removal of oil from water emanating from:

- Refinery effluent
- Tankfarm drainwater
- Ballast water
- Desalter effluent
- Condensate
- Cooling water
- Produced water on and offshore
- Tank draw-off
- Injection water
- Site run-off

Industrial Effluent Treatment

Used for a wide range of applications in the following industries:

- Petrochemical
- Steel
- Galvanic
- Chemical

Ground Water Treatment

Used for contamination caused by low rate but steady spillages using an in situ above grade treatment package.

The range of Skimovex waste water treatment systems includes:

Plate Pack Separator (Inclined plate oil-water separators):

- Downflow and crossflow plate pack.
- Steel tank for atmospheric operation.
- For below grade installation in concrete basin.

Flotation

- Induced air/gas flotation (impellor or recycle design).
- Dissolved air flotation.

Hydrocyclones

- Static & Dynamic.

Dual Media Filters

- Downflow pressure filters.
- Upflow pressure filters.
- Dual flow filters.
- Gravity filters.

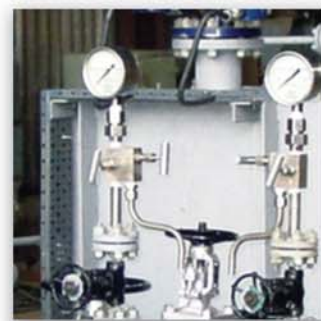

Plate Coalescers/Dehydrators

- High velocity flow regimes.
- Entrained solids and large droplets.

Skimming Systems

- Fixed or floating type skimmers.

Sea Water Strainers

- Automatic self-cleaning strainer/filter systems.

The Skimovex product range reduces the oil in water level from 5000 ppm or greater, down to less than 5 ppm, to meet regulations around the world for both onshore and offshore operations.
